

## THE DIARY OF A INNOCENT MAN

### Day 1

As i type this i look down on the city from my bubble as time moves on around me at a exagereted pace while i am traped in a lexon/plexi-glass prision 250 feet above the metropolis of "Tecna-Fasa" the largest city in the world, i can not help to marvel a the tecnoligy that inprisions me.

You see, i am inprisioned in a chamber that exelerates my molicules and keeps me half out of faze with rest of the world.

but alow me to explane my self, i am patrick .d. murphy of terra ferma #1.0 and i was convicted of treson with is punishable to the means of life in limbo (yes there is limbo). I was framed you see, by a Angry co-worker, but I wont go in to details, but... HE IS INSANE!!

Yet i find that being in a time bubble is actaly Kind of fun, i have books to read good food to eat (you see all live prisoners can live on cavear thanks to the "all-for-fairness" law of 2230). and things to do

### Day 2

Now i shall tell you about how the bubble works sence i have nothing to do (plus i invented IT!). the bubble works by exelerating the molicules in my body at half the speed of light (full speed would put me compleatly out of faze with timeand put me lin limbo the 4<sup>th</sup> dimention) some im out of faze with time, thus I nolonger age but everyting around me moves a twice the speed (if your wondering why citys don't use this to make them perfect it because 1.it recuierse vast a mounts of power and 2. using it on inanimate objects causes them to become highly radioactive and frozen or not they can hurt you) . but i stuck here for ever .

if your wondering why they use time displacement on prizanors that a suspendet over citys, its because

1. we don't have to be looked after by gaurds
2. 2. highs equals vertigo equals less problems
3. in the way we act
4. and 3. it give us something to look at
